

2007 Oregon Soft Winter Elite Yield Trials - Condon

Site Quality Index[†] = 1

1 = Poor 3 = Average 5 = Excellent

Site Description: Environmental conditions severely impacted this site.

A fall infection of barley yellow dwarf virus and a late spring freeze created extremely high plot to plot variability.

Due to these conditions, varietal comparisons at this site are unsuitable for publication

[†] The Site Quality Index is based on the relative performance of check varieties to historical means and the degree of variability found within the trial.

Site Quality Index Descriptions:

1 = Poor; Site highly impacted by unusual environmental conditions making data unpublishable

2 = Below Average; Site was impacted by unusual environmental conditions. Variability was high.

3 = Average; Site was average with normal/acceptable environmental conditions. Variability was medium.

4 = Good; Site was representative of surrounding area with minimal environmental impact. Variability was low to medium.

5 = Excellent; Site was highly representative of surrounding area with no environmental impacts. Variability was very low.
