

FRUIT HARVEST AS DETERMINED FROM FULL BLOOM DATES

The following are long-term averages to help predict beginning harvest dates for tree fruit. Hot weather just prior to harvest will delay apple and pear maturity, but will advance peach maturity. Bartletts usually mature from mid-August to the last week of August, and Comice by late September. Red and Golden Delicious harvest begins late September most years.

| <u>Variety</u> | <u>Days to Maturity</u> | <u>Variety</u> | <u>Days to Maturity</u> |
|---------------------------|-------------------------|-------------------|-------------------------|
| Apple | | Pear | |
| Delicious | 150 | Bartlett | 115 |
| Golden Delicious | 155 | Anjou | 145 |
| R.J. Greening | 145 | Comice | 140 |
| McIntosh | 140 | Bosc | 140 |
| Cortland | 130 | Packham's Triumph | 140 |
| Jonathan | 149 | Seckel | 137 |
| Winesap | 160 | Clapp Favorite | 115 |
| Rome Beauty | 165 | Eldorado | 140 |
| York | 150 | Kieffer | 147 |
| Yellow Newton | 165 | Cherry | |
| Stayman | 155 | Bing | 68 |
