

As a woodland owner or manager, you know how difficult it is to find good sources of “how-to” information. Oregon State University Extension Service has developed a practical and handy guide to effective woodland management. A

Woodland Workbook consists of core publications listed on the following pages. The publications are written by experienced Extension forestry staff. Each publication stands alone, but the titles complement one another. Many copies

are in use by novice woodland owners, experienced forest managers and resource professionals.

Listed here are also other publications available to customize a personal workbook to suit your particular

needs. More publications will be developed as needs are identified by woodland owners and managers, forest resource professionals, and other technical experts.
