## 2008 Oregon Soft Winter Elite Yield Trials - Hermiston

### Site Quality Index = 2

1 = Poor  3 = Average  5 = Excellent

### Site Description: Plant growth and yields were adversely impacted by inadvertent addition of potato sprout inhibitor/growth regulator in irrigation water.

† The Site Quality Index is based on the relative performance of check varieties to historical means and the degree of variability found within the trial.

### Site Quality Index Descriptions:

1 = Poor  Site highly impacted by unusual environmental conditions making data unusable
2 = Very Poor  Site was impacted by unusual environmental conditions. Variability was high
3 = Average  Site was average with normal/acceptable environmental conditions. Variability was medium.
4 = Good  Site was representative of surrounding area with minimal environmental impact. Variability was low to medium.
5 = Excellent  Site was highly representative of surrounding area with no environmental impacts. Variability was very low.

‡ Yield data corrected to 12% moisture. Grain yields shaded in gray are not significantly different from the highest yield at this site.

| * Indicates check variety. |
