### Site Quality Index

- **1 = Poor**: Site highly impacted by unusual environmental conditions making data unpublishable
- **2 = Below Average**: Site was impacted by unusual environmental conditions. Variability was high.
- **3 = Average**: Site was average with normal/acceptable environmental conditions. Variability was medium.
- **4 = Good**: Site was representative of surrounding area with minimal environmental impact. Variability was low to medium.
- **5 = Excellent**: Site was highly representative of surrounding area with no environmental impacts. Variability was very low.

#### Site Description:
Heat and moisture stress contributed to low yield and test weight at this location.

- **Site Average**: 51.6
- **LSD (0.05)**: 9.4
- **CV (%)**: 11.1

#### Site Quality Index

- **†**: The Site Quality Index is based on the relative performance of check varieties to historical means and the degree of variability found within the trial.

#### Site Quality Index Descriptions:

1. **1 = Poor**: Site highly impacted by unusual environmental conditions making data unpublishable
2. **2 = Below Average**: Site was impacted by unusual environmental conditions. Variability was high.
3. **3 = Average**: Site was average with normal/acceptable environmental conditions. Variability was medium.
4. **4 = Good**: Site was representative of surrounding area with minimal environmental impact. Variability was low to medium.
5. **5 = Excellent**: Site was highly representative of surrounding area with no environmental impacts. Variability was very low.

#### Yield data corrected to 12% moisture: Grain yields shaded in gray are not significantly different from the highest yield at this site.

- Grain yields in bold met or exceeded the protein targets for their class.

- * Indicates check variety.
