HOW MUCH SHOULD I WATER?

Scientific Irrigation Management

Water is a precious resource, but sometimes it can be tough to know how much to irrigate and when. This class is meant for a broad audience from home gardeners to agriculture professionals. We will learn how to use soil, weather, and plant information to calculate soil-water balance and learn how to apply just the amount of irrigation water that your plants need. We will also review tools to help you evaluate the success of your irrigation strategy.

Taught by Gordon B. Jones, PhD & Alec D. Levin, PhD
